No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq

Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK.

The present invention describes an Arabidopsis thaliana nucleic acid (I) CC comprising a sequence capable of hybridising under stringent conditions CC to a sequence (S1) selected from any one of the 999 sequences given in CC they can be used as protein expression modulators. (I) can be used in CC identifying homologous or related genes, in producing compositions that CC modulate the expression or function of their encoded proteins, mapping CC functional regions of the proteins, and in studying associated CC physiological pathways. (I) can also be used: (1) for the genetic CC manipulation of cells, particularly plant cells; (2) in screening assays CC of various plant strains to determine the strains that are best capable CC withstanding a particular disease or environmental stress; (3) for CC chancing or inhibiting production of a biosynthetic product in a plant; (4) as probes in mapping and in diagnosis, in genetic modification and CC for screening purposes, to generate additional copies of the nucleic certains to describe a particular disease or any plant cells and as any as a

Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid encoding identifying modulators, po

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a nucleic acid (I, ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DN7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1108

                                                                                                                                             Q
                                                                                                                                                                                                                                                                                    The present invention describes plant polynucleotides encoding CC polypeptides involved in the production and modification of isoprenoids, CC such as terpenoid and steroid compounds. The polynucleotides are used CC in genome mapping, in physical mapping and in positional cloning of CC genes. The polynucleotides and polypeptides are useful in forestry and CC agriculture for manipulation of isoprenoid metabolism, in medicine for CC therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and CC conditions, manipulating isoprenoid pathways or isoprenoid composition CC applications, manipulating isoprenoid pathways or isoprenoid composition CC may, for example, affect plant development, pest resistance, and the CC value of extractives (e.g. pinene and myrcene). The ubiquitous and CC varied roles of isoprenoids make the polynucleotides attractive targets CC analogo and Anbisou to Anbisous in a variety of fields. Analogozo to CC canadata polynucleotides and proteins used in the exemplification of the CC present invention.

                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                              plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, plant y useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DNA excluded by the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a recombinant DNA construct of a (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clottin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors the construction of transgenic plant and animal cells
                                                                         AAC37035 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200055325-A2

Production of prenyl alcohols by cul mutated cells with reduced squalene transcriptional product culturing translationally-active synthase gene ξ express

Disclosure; Page 237-238; 262pp; Japanese.

The invention relates to a method for producing prenyl alcohol comprising culturing mutated cells, having been mutated so as to reduce the amount of transcriptional product of squalene synthase gene transcriptional activity, and then collecting prenyl alcohol from the culture medium. The method is for the production of prenyl alcohols, which is for use in industrial synthesis of isopremoid-terpenoid compounds particularly physiologically-active prenyl alcohol geometric isomers. This polynucleotide sequence represents a nucleic acid sequence relating to the method for producing prenyl alcohol comprising culturing mutated Sequence 1356 304 G; 389 T; 0 other;

                                                                1397
                                                                                                                                                                                                                                                      (pseudogene). Genes of the invention are used to enhance biosynthesis of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP) and isoprenoid pathway derived products in the plastids of transgenic plants and microalgae, for producing herbicide or antibiotic resistant transgenic plants and microalgae, for providing transformed cells with increased isoprenoid production compared to non-transformed cells, and for providing a cell with an inserted polynucleotide sequence encoding one or more products of interest. The present sequence is yeast phosphomevalonate kinase (PMK; ERG8) EC 2.7.4.2. encoding orf.

The present sequence is operon D DNA encoding the entire mevalonate pathway. This operon contains secretisiae orfs encoding phosphomevalonate kinase (PMK), mevalonate pathway in the entermination of the enterm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and isoprenoid biosynthetic pathways and inactive gene sites (pseudogene). Genes of the invention are used to enhance biosynthesis of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of specific genes of mevalonate and isoprenoid biosynthetic pathways, for providing a cell with herbicide or antibiotic resistance, and for providing transformed cells having increased isoprenoid production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hahn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1517

The present sequence is operon B DNA encoding the entire mevalonate pathway. This operon contains S. cerevisiae orfs encoding phosphomevalonate kinase (PMK), mevalonate kinase (MVK), mevalonate diphosphate decarboxylase (MDD), acetoacetyl thiolase (AACT) and A. thaliana orfs encoding 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-COA) synthase (HMGS) and HMG-COA reductase (HMGRt).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1457
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1337 ATCTAGATGTTATCCATATGATAGCACAAACGTCTCATTGTCTTGCACAAGGGAAGGTCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     increased isoprenoid production compared to non-transformed cells, and for providing a cell with an inserted polynucleotide sequence encoding one or more products of interest. The present sequence is operon E DNA encoding the entire mevalonate pathway. This operon contains a cerevisiae orfs encoding phosphomevalonate kinase (PMK), mevalonate kinase (MVK), mevalonate diphosphate decarboxylase (MDD), acetoacetyl thiolase (AACT) and A. thaliana orfs encoding 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-COA) synthase (HMGS); Streptomyces sp. CL190 orf encoding HMG-COA) reductase (HMGRt) and R. capsulatus DNA encoding IPP
                                                                                                                                                                                                                                                                                                                                                                            1397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and isoprenoid biosynthetic pathways and inactive gene sites (pseudogene). Genes of the invention are used to enhance biosynthesis of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP) and isoprenoid pathway derived products in the plastids of transgenic plants and microalgae, for producing herbicide or antibiotic resistant transgenic plants and microalgae, for providing transformed cells with

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/grail-1.3/),
GENSCAN (Chris Burge, MIT, http://ccR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.dk/services/wetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRAAscan SE

                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is MVA3 and the 3' clone is MCM23.
